

## CATARACT SURGERY **LENS IMPLANT** OPTIONS

**STANDARD** - **Monofocal** intraocular lens to correct distance vision - After surgery, most patients will need reading glasses and some still need distance correction - **No** additional charge above what insurance or medicare covers

There is a \$250.00 charge per eye for patients who have had previous refractive surgery (LASIK, LASEK, RK, PRK, etc.) to cover additional testing, refractive surgery medical records review, and complex lens power calculations. This is not covered by insurance companies or medicare and is intended to improve the accuracy of lens power calculations due to the permanent changes made to the cornea.

**CUSTOM ASTIGMATISM** (oval-shaped cornea) - **Toric** intraocular lens to correct distance vision **better** than the standard lens - After surgery, most patients will need reading glasses - \$995.00 additional charge per eye (not covered by insurance or medicare)

**CUSTOM COMPLETE** - **Multifocal** or **Accommodating** intraocular lens intended to correct distance, intermediate, **and** near vision - Designed to decrease or eliminate dependence on glasses - \$2,795.00 additional charge per eye (not covered by insurance or medicare)
